SCHEDULE 2 TO CLAUSE 37.08 ACTIVITY CENTRE ZONE

Shown on the planning scheme map as ACZ2.

FOUNTAIN GATE-NARRE WARREN CBD METROPOLITAN ACTIVITY CENTRE

1.0

Fountain Gate-Narre Warren CBD Framework Plan

2.0

Land use and development objectives to be achieved

Land use

- To encourage more intensive use of under-utilised land which supports the CBD as a Metropolitan Activity Centre.
- To promote land uses that create high levels of activity (both day time and extended night time) around key activity hubs identified as Bunjil Place, entries to the Fountain Gate Shopping Centre, and the Narre Warren Train Station.
Centre, Brechin Gardens and other plazas, Narre Warren Train Station and the business park open space area.

- To promote Bunjil Place as the focus of civic, culture and community uses while reinforcing integrated community services around Webb Street, particularly with appropriate provision for people with disabilities and the elderly.

**Built form**

- To facilitate development that provides appropriate articulation, architectural rhythm and massing, with strong sight lines to street level for passive surveillance.

- To create highly transparent, active and visually engaging building façades at ground floor level, where practicable, particularly fronting streets and public open spaces.

- To deliver a variety of strong character precincts that reflect the objectives of each precinct, and provide distinctive built form and public realm treatments.

- To deliver buildings that include ecologically sustainable development principles that reduce energy, water and waste impacts and manage stormwater runoff so that existing flood risks are not exacerbated.

- To encourage the integration of business identification signage into the design of buildings that is appropriate in scale and adaptable.

**Public realm**

- To deliver a variety of high quality public realm spaces that are human-scaled, flexible and cater for a range of social interactions.

- To enhance streetscapes through consistent tree planting and furniture that provides the street with attractive physical and visual amenity outcomes, including the provision of public art.

- To ensure that new developments front onto and improve the public realm.

- To provide safe and accessible spaces that are designed having regard to the principles of Crime Prevention Through Environmental Design and Universal Design.

**Accessibility and circulation**

- To prioritise pedestrians in the design of all new developments, carparks, roads and public spaces to ensure easy, safe, comfortable and high amenity connections to activity hubs, public transport facilities and activities throughout the CBD.

- To instigate a mode shift towards cycling by including adequate storage and after-trip provisions in all new developments and connecting cycle links throughout the CBD to nearby residents, the Hallam Main Drain and Monash Freeway regional cycle networks.

- To strengthen public transport as a preferred transit mode in the CBD by upgrading facilities and services and linking all precincts to the Narre Warren Train Station.

- To develop a legible, fine-grain street network that manages car-based movements and parking efficiently and discreetly and provides for a safe pedestrian environment.

- To ensure parking areas are, where practicable, integrated, shared and screened from public view, including appropriate separation and buffer landscaping.
Table of uses

Section 1 - Permit not required

<table>
<thead>
<tr>
<th>Use</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accommodation (other than Camping and caravan park, Corrective institution, Dwelling, Host farm and Residential hotel)</td>
<td>Must not be located within Precinct 5. Any frontage at ground floor level must not exceed 4 metres.</td>

Section 3 – Prohibited

Use

Agriculture (other than Animal keeping, Apiculture and Crop raising)
Camping and caravan park
Cemetery
Corrective institution
Crematorium
Earth and energy resources industry
Host farm
Motor racing track
Rural industry
Saleyard
Transfer station

Centre-wide provisions
The following provisions apply to the Fountain Gate-Narre Warren CBD.

Use of land
A permit is not required to use land where the use is conducted by or on behalf of a public land manager or Parks Victoria under the relevant provisions of the Local Government Act 1989, the Reference Areas Act 1978, the National Parks Act 1975, the Fisheries Act 1995, the Wildlife Act 1975, the Forest Act 1958, the Water Industry Act 1994, the Water Act 1989, the Marine Act 1988, the Port of Melbourne Authority Act 1958 or the Crown Land (Reserves) Act 1978.

Subdivision
Subdivision should create road networks and lots that promote walkability and, where appropriate, provide mid-block access through lanes, pedestrian-only streets and other open spaces.

Buildings and works
No permit is required to construct a building or construct or carry out works for the following:

- The installation of an automatic teller machine.
- Alterations to an existing building façade provided:
  - The alteration does not include the installation of an external roller shutter.
  - At least 75 per cent of the building façade at ground floor level is maintained as an entry or window with clear glazing.
- An awning that projects over a road if it is authorised by the relevant public land manager.
- Buildings and works for the purposes of Local Government, Education or Transport, provided the use is carried out by, or on behalf of, the public land manager.

No permit is required to construct a building or construct or carry out works for the following within Precinct 5:

- A single dwelling on a lot greater than 300 square metres.
- Works normal to a dwelling.
An outbuilding (other than a garage or carport) on a lot, provided the gross floor area of the outbuilding does not exceed 10 square metres and the maximum building height is not more than 3 metres above ground level.

A front fence that does not exceed the maximum height specified in Clause 54.06-2.

Construct one dependent person’s unit on a lot.

### Design and development

The following design and development requirements apply to an application to construct a building or construct or carry out works:

#### Dwellings and residential buildings

On a lot of less than 300 square metres, a development must meet the requirements of Clause 54 if it proposes to:

- Construct or extend one dwelling; or
- Construct or extend a front fence.

A development up to four storeys, excluding a basement, must meet the requirements of Clause 55 if it proposes to:

- Construct a dwelling if there is at least one dwelling existing on the lot.
- Construct two or more dwellings on a lot.
- Extend a dwelling if there are two or more dwellings on the lot.
- Construct or extend a dwelling if it is on common property.
- Construct or extend a residential building.
- Construct or extend a front fence within 3 metres of a street if the fence is associated with two or more dwellings on a lot or a residential building.

#### Public realm

New development should:

- Enhance public spaces and limit off-site impacts.
- Create visual interest through articulation and materials on frontages to all streets, plazas and open space.
- Create facades that are designed with clear and frequent entries and openable sections providing opportunities for activation and passive surveillance and allow for balconies and roof terraces on upper levels.
- Be visually prominent to corners, particularly Gateway/Entry Points, through architectural features that create landmarks and bookend street blocks.
- Take their primary address from the primary highest order street, where located on a corner.
- Maximise safety through the application of Crime Prevention Through Environmental Design principles to public realm interfaces at ground and upper levels, taking into consideration surveillance, activation, lighting, landscaping and security.
- Consider the land use and development expectations on adjacent sites in the design of the development proposed.
- Include shopping trolley parking areas and containment systems in new retail developments to reduce the proliferation of loose shopping trolleys in the public realm.

#### Building height
Buildings and works should not exceed the preferred heights specified in the precinct provisions at Clause 5 of this schedule.

For the purposes of this schedule, the preferred height does not apply to service equipment, including plant rooms, lift overruns, solar collectors and other such equipment, provided the following criteria are met:

- No more than 50% of the roof area is occupied by the equipment.
- The equipment is located in a position on the roof so as to minimise additional overshadowing of neighbouring properties and public spaces.
- The equipment is designed, screened and finished in a non-reflective material and of a colour to the satisfaction of the responsible authority.

**Street wall heights, upper level setbacks, overshadowing and overlooking**

New development should provide street wall heights and upper level setbacks in accordance with:

- The precinct requirements specified in Clause 5.0 of this schedule; and
- Clause 55 Standards B17, B21 and B22 for the development of land adjoining a residential property or Precinct 5.

All buildings and works should be designed to minimise casting shadows on the public realm and public spaces, including those outlined in Table 1 of this schedule and existing residential zoned land.

**Table 1: Overshadowing requirements**

<table>
<thead>
<tr>
<th>Location shown on Precinct map</th>
<th>Overshadowing requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brechin Gardens</td>
<td>Avoid overshadowing Brechin Gardens (as defined by the extent of the Heritage Overlay HO153) for no more than 7 metres, between 11am and 2pm on 22 June.</td>
</tr>
<tr>
<td>Plazas</td>
<td>Avoid overshadowing more than 50 per cent of the space for at least three hours between 9:00am and 3:00pm on 22 September.</td>
</tr>
<tr>
<td>Footpaths on the south side of east-west streets</td>
<td>Avoid overshadowing for at least three hours between 9:00am and 3:00pm on 22 September.</td>
</tr>
</tbody>
</table>

All buildings should be designed to address roads and public spaces for passive surveillance, to minimise overlooking of private spaces and maximise solar access.

**Active frontages**

New development should:

- Avoid large expanses of blank wall, where practicable, otherwise articulate through the use of material and finishes.
- Screen external-facing service areas, garbage storage areas, car parking, garage doors and loading areas, from public view using buildings, vegetation or architectural features.
- Provide clear glazing to at least 60 per cent of ground floor retail and office frontages.
- Avoid dark or obscure glazing on ground floor and upper level facades.
- Provide well-articulated building entrances through architectural elements on primary streets to make them clearly legible and create a sense of address.
- Provide individual entry doors to ground floor tenancies that have frontages to a street, where practicable (except for Precinct 4 and Precinct 2, where ground floor tenancies may be accessed from shared lobbies).
- Provide opportunities for alfresco dining and openable facades on the ground level where appropriate to the proposed land use, particularly at activity hubs.
- Maximise the activation of upper levels, including residential or commercial spaces, through visible windows and balconies to facilitate visual interaction and passive surveillance, while retaining privacy where appropriate.
- Strategically locate lift core and stair wells within the floor plate of buildings to achieve efficient and attractive architectural form. If positioned on the building façade, the lift core or stair well should form part of an architectural feature element and incorporate clear glazing to create sight lines to and from the street.

**Pedestrian amenity and streetscape improvements**

New development should:
- Include continuous and generous weather protection for pedestrians where adjacent to key pedestrian routes.
- Avoid the use of reflective materials along ground level facades.
- Upgrade adjacent footpaths and laneways, to the satisfaction of the responsible authority and to DDA compliance where practicable.
- Include spaces that cater for a range of social interactions from large community festivals to temporary activities and meeting points to encourage people to linger, participate, engage and enjoy the centre.

Where a development includes road, car park or nature strip works, new or upgraded footpaths should be a minimum of 3 metres wide on both sides of streets and shared bicycle paths provided, as shown on the precinct maps in Clause 5.0.

**Services and loading**

New development should:
- Minimise vehicle and building services access points and screen loading facilities.
- Conceal services, plant and equipment from view through integration into the architectural form or set behind architectural elements and roof valleys.

**Landscaping**

New development should:
- Include Water Sensitive Urban Design (WSUD) elements with rain gardens and tree pits, and irrigation that utilises recycled water.
- Provide extensive tree planting within unenclosed car park areas and setback areas to shade and improve the microclimate.
- Include green/vegetated walls and feature planting to enhance the presentation and environmental performance of the precinct, where practicable.
- Utilise upper landscaping on terraces and balconies.
- Enhance the amenity of the public realm through themed tree planting, landscaping and high-quality material finishes.
- Include design features to reduce vehicle conflict with pedestrians, particularly around plaza spaces.

**Circulation, transport and parking**

New development should:
Locate secure car parking in basements. If located at or above ground level, secure car parking should be concealed from view and integrated within the overall design of the building through continued architectural façade treatment, where practicable.

Be designed so that car parking areas do not dominate street frontages or diminish opportunities for street activity.

Be designed to promote walkability within the CBD and provide mid-block access where appropriate to create a fine grain pedestrian network.

Provide activation, opportunities for passive surveillance and weather protection where adjacent to key public transport infrastructure.

**Environmentally sustainable development**

New development should:

- Ensure best practice environmentally sustainable design is met in relation to building energy management, water sensitive urban design, construction materials, indoor environment quality, canopy cover, waste management and transport.

- Maximise energy efficiency through the orientation, siting and layout of buildings, and the location of openings to achieve high levels of natural ventilation and light penetration within the constrained urban form.

- Maximise summer shade and winter sun through tree-lined streets and open spaces, deciduous plantings and built form that is responsive to solar access through height limits and setbacks.

- Reduce the Urban Heat Island effect through extensive canopy tree cover, green roofs, green/vegetated walls and WSUD.

- Maximise access to sustainable transport modes.
5.1 Precinct 1 - Civic and Mixed Use

5.1-1 Precinct map

**Precinct objectives**

- To encourage the development of a recognisable hierarchy of east-west and north-south boulevards, streets, shared paths and pedestrian links prioritising walking, cycling and bus use.
To promote high density development that incorporates a mix of land uses and provides for active street frontages.

To protect and enhance the heritage, health and amenity of Brechin Gardens, heritage buildings, significant trees and vegetation elements within the precinct and immediate surrounds.

To discourage large at-grade car parking and to design future parking areas to be integrated into the existing built form, with a pedestrian focus throughout.

To avoid standalone isolated buildings.

### 5.1-3 Precinct requirements

<table>
<thead>
<tr>
<th>Street</th>
<th>Preferred setback</th>
<th>Preferred maximum street wall height</th>
<th>Preferred minimum upper level setback</th>
</tr>
</thead>
<tbody>
<tr>
<td>Priority frontages (identified on Precinct map)</td>
<td>0 metres</td>
<td>11.5 metres</td>
<td>4 metres</td>
</tr>
<tr>
<td>All other streets and roads</td>
<td>0 metres</td>
<td>14.5 metres</td>
<td>4 metres</td>
</tr>
</tbody>
</table>

### 5.1-4 Precinct guidelines

- Works within the area identified as ‘road/link alignment subject to further planning’ on the Precinct Map at Clause 5.1-1 should provide for access and movement to and through the precinct.
- Built-form surrounding Brechin Gardens should provide high quality architectural design and articulation, activate the ground level and provide passive surveillance to the gardens from upper levels.
- Overshadowing of Brechin Gardens and the heritage trees along Princes Highway should be minimised to reduce health impacts on trees.
- Upper levels should be designed to offer opportunities for balconies, roof terraces and glazing with strong sight lines to the street for passive surveillance.
- Developments along Webb Street should create opportunities for activation.
- The public realm should be upgraded to create a high amenity pedestrian environment connecting Bunjil Place to the activity hubs and public transport nodes.
- Intensified urban development is encouraged along Princes Highway, ensuring buildings address the highway and Narre Warren North Road.
- New buildings should frame views and create vistas from Princes Highway into the CBD and views of Brechin Gardens from adjacent areas.
- Subdivision and development should create street blocks with pedestrian connections, especially through to Brechin Gardens and along Princes Highway, to allow for direct pedestrian access to Narre Warren Train Station.
- Residential and large restricted retail developments are discouraged at ground floor level where activation of frontages to pedestrian areas cannot be achieved.

### 5.1-5 Any other requirements

None specified.
5.2 Precinct 2 - Retail core

5.2-1 Precinct map

LEGEND
- Activity centre boundary
- Precinct boundary
- Existing road
- Gateway/entry points
- Plaza
- Bus interchange
- Mall entry points
- Shared path route
- Priority frontage - preferred street wall height - 11.5m with 4m upper level setback
- Residential interface

0 100 metres

5.2-2 Precinct objectives

- To encourage a wide range of uses, including retail, entertainment, office, leisure and hospitality, where appropriate.
- To facilitate the expansion of retail services through the provision of a second department store, an improved and expanded entertainment and hospitality precinct, and by accommodating new and emerging retail formats.
- To avoid standalone isolated buildings.
- To integrate the existing built form into new and adjacent street-based built form, where practicable, and encourage greater activation at the periphery of the shopping centre, emphasising interfaces to public open spaces.

- To enhance car parking areas through landscaping, covered walkways and integration into built form, providing convenient pedestrian access from parking areas to main building entrances.

- To provide a sensitive interface to residential development north of the CBD through a stepping down of the built form within close proximity to dwellings.

5.2-3 Precinct requirements

<table>
<thead>
<tr>
<th>Street</th>
<th>Preferred setback</th>
<th>Preferred maximum street wall height</th>
<th>Preferred maximum upper level setbacks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Priority frontages</td>
<td>0 metres</td>
<td>11.5 metres</td>
<td>4 metres</td>
</tr>
<tr>
<td>(identified on Precinct map)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>All other streets</td>
<td>0 metres</td>
<td>14.5 metres</td>
<td>4 metres</td>
</tr>
</tbody>
</table>

5.2-4 Precinct guidelines

- Visual connections to the Civic and Mixed Use Precinct and activity hubs should be maximised to achieve a strong sense of place and orientation throughout the precinct.

- Vertical expansion of the internal mall is encouraged, where practicable.

- A greater mix of uses and active edges should be introduced at the mall entry points and building frontages.

- New buildings and the public realm should be designed to create a seamless transition from the internal malls to external streets, key pedestrian routes, pedestrian-only streets and plazas.

- Excellent urban design outcomes should be delivered through high quality building interfaces to the public realm and by reducing the visual dominance of car parks.

5.2-5 Any other requirements

None specified.
5.3 Precinct 3 - Narre Warren Village

5.3-2 Precinct objectives

- To promote intensive, multi-storey transit-oriented use and development close to the Narre Warren Train Station, encompassing commercial, accommodation and community uses.

- To reinforce the importance of the Narre Warren Train Station as a key transport node in the CBD and improve the bus interchange, cycle and pedestrian links to the area.

- To reduce through traffic in the precinct and minimise existing risks at the level crossing.
To support the established street-based character of Webb Street as a high amenity, higher density, mixed use, tree-lined boulevard while retaining the local convenience function of the village.

To improve the amenity of the public realm in a manner that supports the ‘village’ atmosphere and creates more orderly, efficient and safe pedestrian and vehicle movement throughout the precinct.

To avoid standalone isolated buildings.

To support high density residential development integrated with other land uses, including fine-grain shop-top housing and Small Office Home Office (SOHO) development, while providing a sensitive interface to adjoining residential areas.

5.3-3 Precision requirements

<table>
<thead>
<tr>
<th>Preferred maximum building height</th>
<th>Preferred street setbacks</th>
<th>Preferred maximum street wall height</th>
<th>Preferred minimum upper level setbacks</th>
</tr>
</thead>
<tbody>
<tr>
<td>23 metres within the area identified on Precinct map</td>
<td>0 metres; or Where land adjoins Precinct 5, the standards for side and rear setbacks specified in Clause 55.04-1 are to be met</td>
<td>11.5 metres</td>
<td>4 metres</td>
</tr>
<tr>
<td>No maximum limit for all other areas</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

5.3-4 Precision guidelines

- The Narre Warren Creek drainage corridor should be integrated into any proposals along its length, to support greater usage of the open space along this corridor.
- The coordinated redevelopment of fragmented lots is encouraged to provide cohesive developments.
- Development should be designed to minimise the visual dominance of carparks.
- Small, intimate public spaces should be developed that connect to each other by a network of high quality laneways and pedestrian links.
- Individual tenancy/shop widths should be contained to not more than 10 metres along a main street.
- Development should include no more than 6 metres continuous glazing without a tenancy entry.
- New development should not compromise existing or future rail operations within the railway corridor, including the potential for future grade-separation of the Webb Street railway crossing.

5.3-5 Any other requirements

None specified.
5.4 Precinct 4 - Business Park

5.4-1 Precinct map

5.4-2 Precinct objectives

- To promote employment and job creation, particularly with office and higher order employment functions.
- To support a range of complementary land uses, including child care, food and drink premises, gymnasiums, and small-scale retailing.
- To ensure any retail development is complementary to the office/commercial uses and designed to support the retailing function of Precincts 1, 2 and 3.
To develop a service road fronting Narre Warren North Road with adjacent multi-level development addressing the streetscape and framing view lines towards streets and open spaces.

- To ensure that development that abuts the existing open space areas provides a well-considered built form interface that delivers appropriate activation, integration and passive surveillance to the open space.

- To improve the amenity of the area through public realm improvements to streets, pedestrian links and open spaces, including street tree planting and landscaping.

### 5.4-3 Precinct requirements

<table>

</tbody>
</table>

| Type 2 | Preferred 0 metres to street | 11.5 metres | 4 metres |
|        | Maximum 3 metres to street (except where not allowed by an easement or by curvilinear frontages) | | |

### 5.4-4 Precinct guidelines

- Development should be of a contemporary architectural style in keeping with the significant commercial role of the precinct.

- At-grade car parking or deck car parking should be provided behind proposed building frontages.

### 5.4-5 Any other requirements

None specified.
5.5 Precinct 5 - Residential Intensification

5.5-1 Precinct map

To provide a diverse mix of housing and increased density ensuring a range of housing options for future residents close to transport links, employment and services.

To encourage the development of the Princes Highway frontage for higher density housing and ancillary commercial uses, providing an active frontage facing the commercial areas of the CBD.

To promote a high standard of residential amenity for new development, including optimum solar access and privacy through design.

To encourage the consolidation of sites to facilitate a broader range of medium and higher density residential developments.

</tr>
</thead>
<tbody>
<tr>
<td>13.5 metres, or 16.8 metres where the site adjoins a road in a Road Zone or an associated service road</td>
<td>The construction of two or more dwellings on a lot should meet Clause 55 Standard B6 or 5 metres, whichever is lesser</td>
<td>All buildings and works (including non-residential buildings) sharing a property boundary with an existing residential dwelling should meet Clause 55 Standards B17, B21 and B22</td>
</tr>
</tbody>
</table>

5.5-4 Precinct guidelines

- Translucent elements such as balconies and glazing should provide building articulation.
- Consideration will be given to higher built form and residential density for consolidated sites.
- Larger developments should include a range of dwelling sizes and types to provide housing choices for future residents, including one- and two-bedroom dwellings.
- On-site parking should not be located forward of the front building alignment.
- Tree planting should form part of the front setback treatment, including canopy trees, for new residential developments.
- Tree planting buffers should be provided at the rear boundary on multi-level apartment developments.
- Front fences should be transparent to allow passive surveillance of the street.
- New residential development adjoining the Vesper Drive industrial and commercial precinct should include acoustic protection from these uses, where practicable.
- New residential development fronting Princes Highway should enhance pedestrian movement through the use of landscaping and low, transparent front fences.

5.5-5 Any other requirements

None specified.

6.0 Application requirements

The following application requirements apply to an application for a permit under Clause 37.08, in addition to those specified in Clause 37.08 and elsewhere in the planning scheme, and must accompany an application, as appropriate, to the satisfaction of the responsible authority:

- For applications four or more storeys in height, a 3D model that shows:
  - The potential overshadowing impact of the development on the open space and habitable rooms of adjoining properties and within the proposed development, and how the development design minimises impacts and ensures maximum solar access internally for dwellings, to neighbouring properties and the public realm.
  - The potential impact of the development on the public realm adjacent to the proposal, ensuring that overshadowing of major pedestrian routes, heritage sites, parks and other public spaces is minimised. Reasonable solar access should also be maintained to the ground floor of buildings opposite in winter, where practicable.

- For the construction or extension of a building:
A Sustainable Design Assessment for all non-residential developments with a gross floor area of between 500m² and 1,000m² or developments of 3-9 dwellings to include:

- a simple assessment of the development, which may use relevant tools such as BESS or STORM, or an assessment approach to the satisfaction of the responsible authority; and,
- the identification of environmentally sustainable development measures proposed, having regard to the site’s opportunities and constraints.

A Sustainable Management Plan for all non-residential developments with a gross floor area of more than 1,000m² or developments of 10 or more dwellings to include:

- a detailed assessment of building energy management, WSUD, construction materials, indoor environment quality, waste management, and transport, which may use relevant tools such as BESS, STORM, MUSIC or Green Star or an alternative assessment approach to the satisfaction of the responsible authority; and,
- the identification of achievable environmental performance outcomes, having regard to the site’s opportunities and constraints, documentation of the means by which they can be achieved, and demonstration that the building has the design potential to achieve these outcomes; and,
- a Green Travel Plan.

For all developments with a gross floor area over 5000m², in addition to a Sustainable Management Plan, it must be demonstrated that the development has the ability to achieve a 4-star rating or above under a current version of Green Star rating tool or equivalent.

For all mixed use developments, the above listed information is required as most applicable to each use component of the development.

The above ESD requirements will expire if superseded by equivalent assessment requirements in a Local Policy, the Victoria Planning Provisions or the Building Code of Australia Regulations.

A report which demonstrates that development will achieve the following:

- Reduction in the volume of stormwater runoff from new roof areas of 5% from the calculated annual runoff volume.
- Stormwater runoff and proposed drainage discharge rates to be equal or less than pre-development conditions, to minimise flood risks within the broader catchment.
- Response to designated 1% Annual Exceedance Probability (AEP) flood levels, where applicable, including heights of floor levels and access into basement carparks.
- Make provision for the safe and effective passage of stormwater flows up to and including the 1% AEP storm.

A transport assessment that includes the impact of generated traffic on the existing road network, parking generation rates and traffic management recommendations. The assessment must also include, where appropriate, a demonstration of how the proposal seeks to enhance the opportunities for increased public transport usage, addressing pedestrian accessibility, weather protection, safety measures and commuter information.

Where an application proposes a building that does not meet the minimum setbacks, maximum street wall height or overshadowing standards set out in this schedule, an Urban Context Report submitted with the application must demonstrate how the proposed development achieves the relevant objectives, requirements and guidelines of this schedule.

For applications in Precinct 1 on land shown on Precinct Map at Clause 5.1-1 as ‘road/link alignment subject to further planning’, an Access and Movement Strategy that demonstrates the development provides for, or contributes to, a cohesive road and pedestrian network.
Notice and review

An application to:

- Construct a building or construct or carry out works that exceed the preferred maximum building heights contained within Clause 5 of this schedule
- Use land or construct a building or construct or carry out works in Precinct 5
- Construct a building or construct or carry out works within 150 metres of the Residential Interface in Precinct 2 (identified on the Precinct map at Clause 5.2-1 to this schedule) in which the height of building or works is in excess of a 1:2 height-to-setback ratio from this boundary is not exempt from the notice requirements of Section 52(1) (a), (b) and (d), the decision requirements of Section 64(1), (2) and (3) and the review rights of Section 82(1) of the Act.

Decision guidelines

The following decision guidelines apply to an application for a permit under Clause 37.08, in addition to those specified in Clause 37.08 and elsewhere in the scheme which must be considered, as appropriate, by the responsible authority:

General

- The interface with adjoining zones, especially the relationship with residential areas.

Subdivision

- The effect the subdivision will have on the potential of the area to accommodate future development opportunities and transport links.
- Whether the subdivision promotes lot consolidation, where practicable.

Design and built form

- The effect the proposed development will have on solar access to existing public spaces.
- Whether the scale and intensity of a development would result in the underdevelopment of the site.
- The extent to which the development prioritises walking, cycling and public transport use, and provides car parking that responds to anticipated demand, does not dominate the street frontage, and is functional and well-designed.
- The extent to which the development is consistent with the principles of Environmentally Sustainable Development.
- The extent to which the development is consistent with the principles of WSUD.
- The extent to which the development provides for the surveillance of public spaces and creates a safe environment.
- The extent to which the development encourages activity within public streets and spaces.
- For properties designated as Gateway/Entry Points on the Precinct maps contained within this schedule, whether future built form:
  - Highlights the built form through the use of projections, detailing and massing that presents to the surroundings and street frontages.
  - Complements rather than dominates the existing built form through height form and scale.
  - Provides a key point of reference for users of the activity centre.
  - Provides an iconic built form that differentiates itself from surrounding buildings.
